

WordPress site installeren

Via WP Toolkit kan je eenvoudig een nieuwe WordPress website installeren. Open WP Toolkit en klik op 'Install'.

In het volgende scherm kies je het domein waarop de nieuwe WordPress website geïnstalleerd moet worden. De 'Installation directory' is optioneel. Wil je de WordPress website op het root-domein installeren, laat dan dit vak leeg.

Verder kan je onder andere bepalen of WordPress, de plugins en de themes al dan niet automatisch bijgewerkt moeten worden.

Install WordPress

Choose installation options

Random values will be generated if fields are left blank.

General

Installation path	<input type="text" value="https"/> <input type="text" value="://"/> <input type="text" value="nexxwave-demo3.be"/> <input type="text" value="/"/> <input type="text" value="Installation directory"/>
Website title	<input type="text" value="Everything Inc."/>
Plugin/theme set	<input type="text" value="None"/>
Website language	<input type="text" value="Nederlands"/>
Version	<input type="text" value="6.4.1 (current)"/>

WordPress Administrator

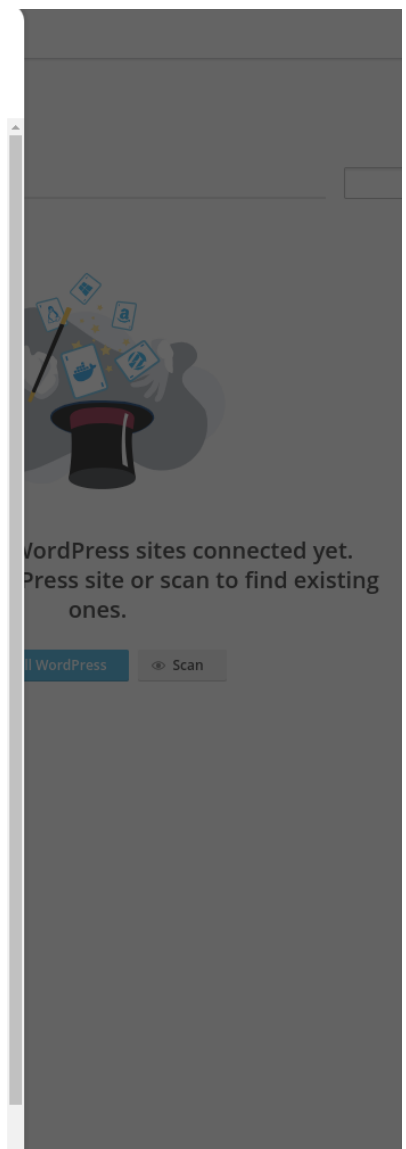

Username	<input type="text" value="krislowet_qklcf0wc"/>
Password	<input type="password" value="....."/> <input type="button" value="Generate"/>
Email	<input type="text" value="voorbeeld@nexxwave.be"/>

Database

Automatic Update Settings

WP Toolkit can automatically install WordPress core, plugin, and theme updates as soon as they become available.

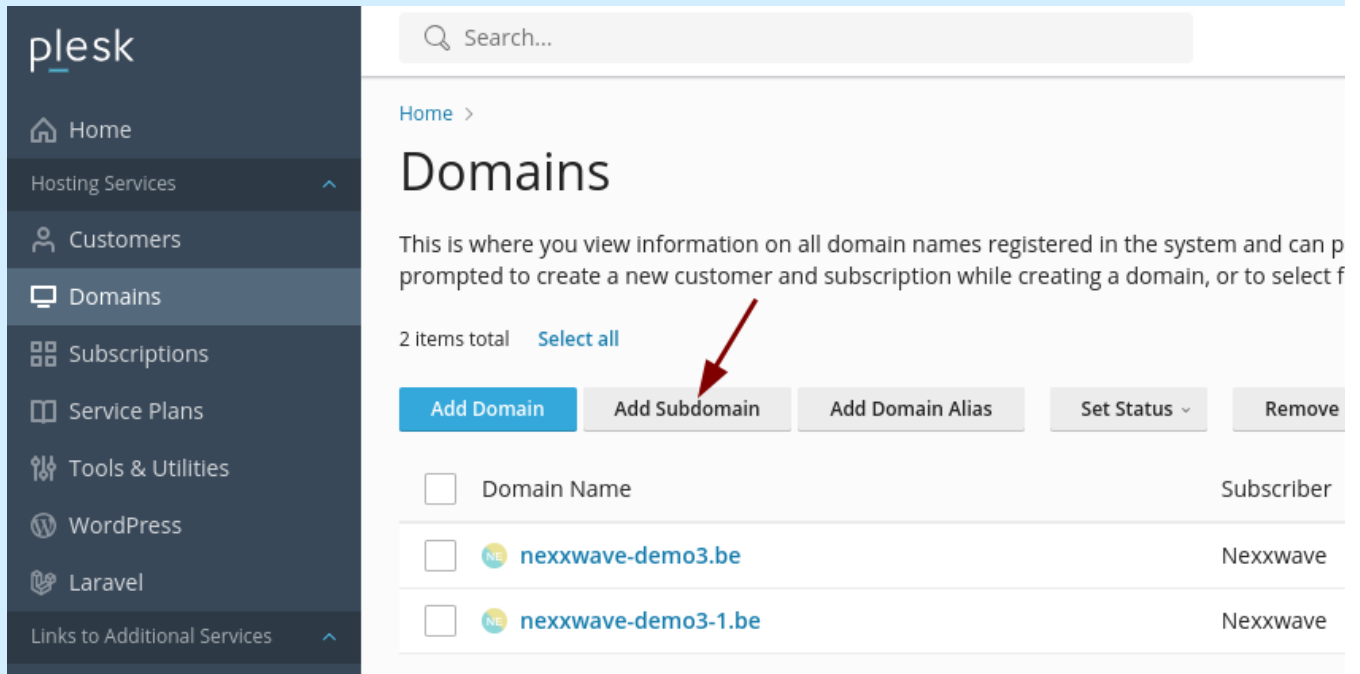

Update WordPress automatically	<input type="radio"/> No For example, neither 4.7.1 nor 4.8 will be automatically installed
	<input type="radio"/> Yes, but only minor (security) updates For example, automatically install 4.7.1 but not 4.8
	<input checked="" type="radio"/> Yes, all (minor and major) updates For example, automatically install 4.7.1 and 4.8
Update plugins automatically	<input checked="" type="radio"/> Defined individually Each plugin uses its own autoupdate settings
	<input type="checkbox"/> Enable autoupdates by default for new plugins installed via WP Toolkit
	<input type="radio"/> Defined individually, but security updates are autoinstalled Each plugin uses its own autoupdate settings, but vulnerable plugins will be updated automatically regardless of their settings

WordPress wordt onmiddellijk geïnstalleerd in de gekozen map zonder te controleren of deze map leeg is. Vergewis je er dus van dat je het juiste domein en de juiste map kiest. Alle

bestaande bestanden zullen overschreven worden.

Als je WordPress op een subdomein wilt installeren (bv. blog.nexxwave-demo3.be), dan moet je in dit domein eerst een subdomein aanmaken. Dat doe je via 'Domains > Add Subdomain':

The screenshot shows the Plesk Domains management interface. The left sidebar contains navigation options: Home, Hosting Services, Customers, Domains, Subscriptions, Service Plans, Tools & Utilities, WordPress, and Laravel. The main content area is titled 'Domains' and shows a list of 2 items. A red arrow points to the 'Add Subdomain' button.

Search...

Home >

Domains

This is where you view information on all domain names registered in the system and can be prompted to create a new customer and subscription while creating a domain, or to select f

2 items total [Select all](#)

[Add Domain](#) [Add Subdomain](#) [Add Domain Alias](#) [Set Status](#) [Remove](#)

<input type="checkbox"/>	Domain Name	Subscriber
<input type="checkbox"/>	 nexxwave-demo3.be	Nexxwave
<input type="checkbox"/>	 nexxwave-demo3-1.be	Nexxwave
